

KICKSTARTER SHOUTBOX

S

houtbox 1.0 : an anti stress box for business people and academics

Did you ever wonder : “How may I feel after yelling on my manager, my co-workers or simply because I want to ?” Sometimes, it’s not possible : you can be fired, you can lose friend or bother your neighborhood.

That’s why we invented, the Shoutbox ! A design and discrete box thought for shouting in any places. Made of a high quality grade plastic and foam, it allows noise reduction up to 170Db. That’s above a plane lift-off !

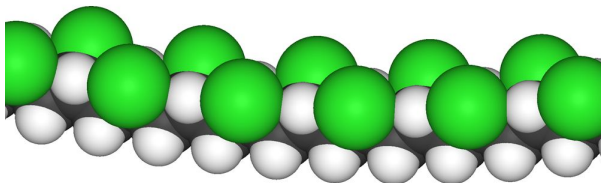

Functionalities

Inside, a high quality soundproofing material from Germany used for music studios.

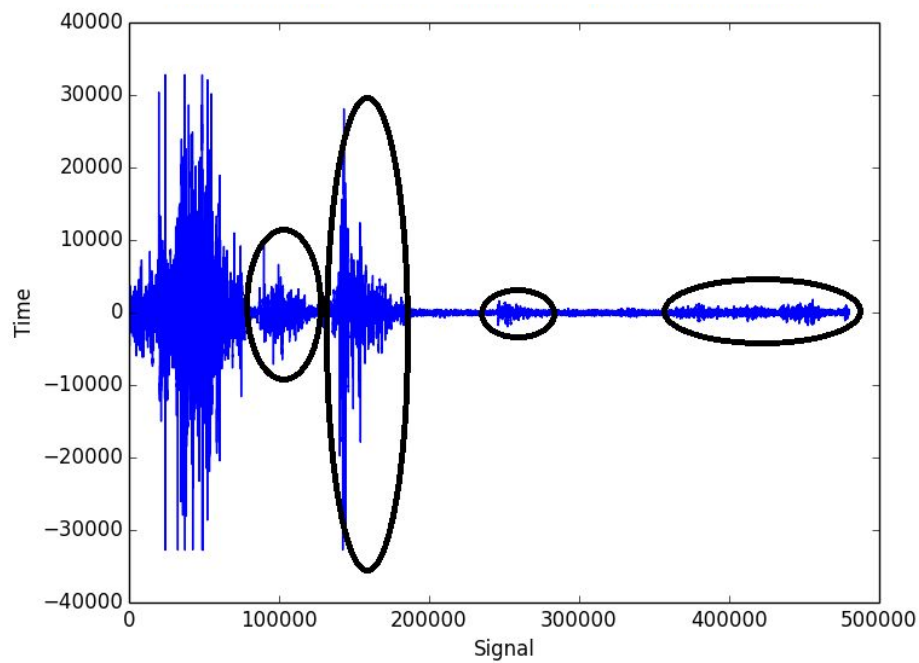

Outside, a recent UPVC coloured in black, white, grey, blue, pink and red. UPVC is molecular upgrade from PVC allowing rigid form without breaking easily. It's also used for new windows in modern houses.

Noise reduction

Noise reduction is at the heart of our attention. It was a priority to make a box that allow you to yell as much as you want without caring about the people around and the look of others. With our top quality materials and the two sound engineers working in the team, we succeeded at making at 95% noise reduction with consuming any energy. The soundproofing material absorb the sound and make it bounce inside the cone. The resultat is a noise lost in the cone and that will never be heard by anyone. Perfect for discretion, the shoutbox is your top gadget you need to bring with you all the time !

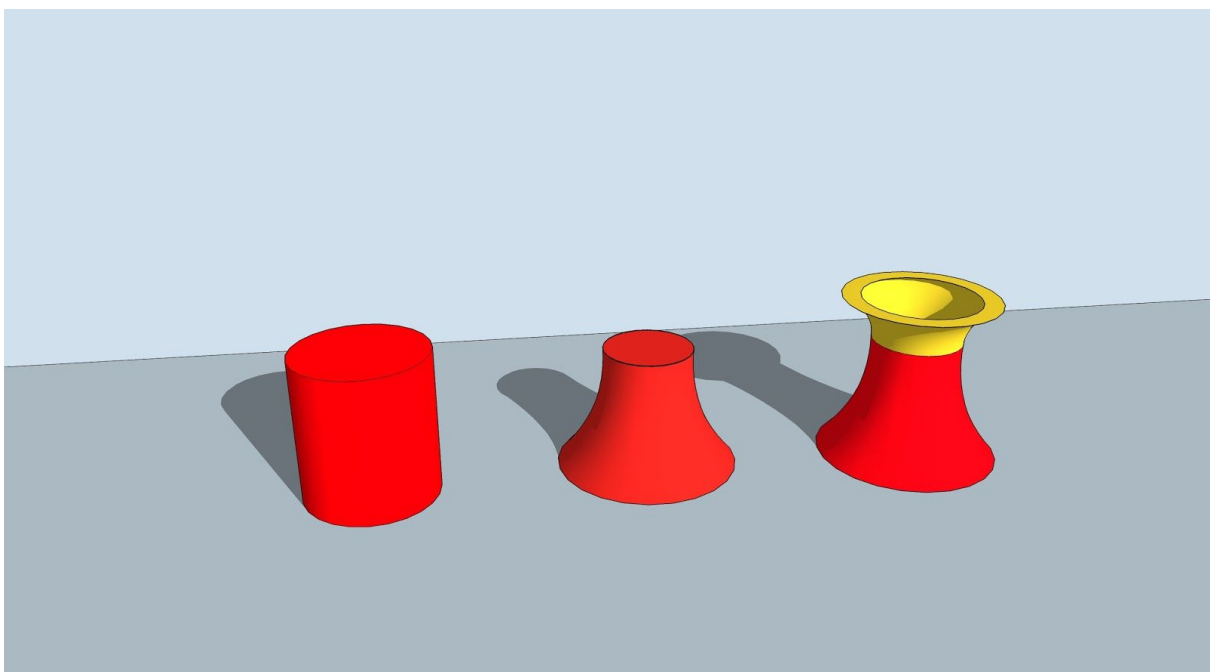

As u can see with the black circles, the shoutbox was able to reduce something really loud into an inaudible sound with no difficulties. This is only the first version of the product and we are already able to present you a product capable of reducing noises up to 95%.

Design

We start from a simple cylindre to a complex corn, designed to perfectly fit a standard mouse, thus maximising the noise reduction. Only 5bd are heard by a normal ear in standard conditions (room), 1db on the street and 10db in a quiet classroom/meeting room.

Here are the different versions we made :

Colors

Available in grey, black, white, blue, pink and red, everyone found their happiness.

The Story

At our engineering school, we had loads of technical problem in computer science and it was really annoying on a daily basis. Sometimes, we had to go to an isolate room and yell in pillows in order to reduce stress and keep working on the projects we had. After hours and hours in these rooms, we decided to create this project. Hours and hours of design, innovation and engineering, we can finally announce that we are ready to produce the Shoutbox 1.0 with your help !

Why do you need it ?

First, we need a time warp in the past. Back in the old days, workers had really difficult work conditions. They were working hard to get a miserable income. The sad thing about that is that they did not even complained about it. The reason may be mysterious, but in fact is really not. They were just used to it and thought it was a normal thing ! But would we be agreeing with these conditions in our times ? Of course no. Same thing apply nowadays : you should always be exigent about the way you work ! You may not even feel like it is a need, but once you have it you won't go back.

According to an american study of the Boston University published in 2017, shouting has the same relief effect as using a punching ball. The nervotrons, which are produced by our brains, are reduced by 90% with this product. According to another study of the Global Health Organization and published in 2015, the nervotrons are strongly tied to the stress, which is responsible of a deteriorating quality of life ! With that said, why would you deprive yourself of an object that affordable with so much benefits ?

What's next ?

If everything goes according to our plans, we plan to release different colors to complete our collection. From black to red, yellow and shades of blue, you will be able to pick whatever color please you! We will also continue researches on our product to release shoutboxes with new shapes to make it more discreet and customizable.

Here is our detailed roadmap for the year 2019:

February/March : wait for your help, redact the contract with the manufacturers.

April : create the production orders, start calculation of delays

May : buy raw materials, validate the prototypes and pre-production builds

June : Begin manufacturing and start shipment

July : end of shipment and customer services

Any help from you is a real advancement in the reduction of stress at work and university. If you have any comments, suggestions or support messages, we are of course open to them. Click the “help us on this” button on the top right corner and/or share this with your friends and family.

We hope you will be part of this adventure with us !

THANK YOU,
THE SHOUTBOX TEAM
